MBQUART
German Engineering

Absolute Perfection!

The origin of MB Quart's actual name shows our deep rooted commitment to the precise reproduction of music. Feeling the music, experiencing the music, recreating the music, MB Quart is setting new standards for the premium performance sector loudspeakers in both design and performance. MB Quart's loudspeaker technology has grown from being a past design leader in a category where the recorded music starts, e.g. the studio microphone. By mastering the recorded music's delicate beginning via our professional microphone expertise enables our German engineers to easily understand the criteria needed to design and engineer top performance speaker models for both audio and home theatre applications. This very same microphone engineering prowess has resulted in some of the finest performing MB Quart headphones. Headphones simply put, are just microphones in reverse. MB Quart is one of few manufacturers who can claim to have mastered the precise reproduction of music on such a grand scale.

MB Quart Loudspeaker models are available in a choice of real wood and vinyl veneers. Those with contemporary tastes can have speaker choices of black or white piano grade finishes. Should your needs for accurate music be foremost and style second, MB Quart offers you loudspeaker choices with standard black wood grain vinyl finishes.

Your MB Quart loudspeaker choices start with the classic tower floor-standing model loudspeakers followed by the stand-mount and bookshelf models. For the home theater, the same accuracy of music reproduction is offered in MB Quart's tiered family of in-wall and in-ceiling line-up.

It's MB Quart's attention to detail that makes our loudspeakers stand out from the crowded field. Our impressive portfolio of technologies, in both driver and cabinet design genuinely improve your listening experience with accuracy of tonal character, resolution of fine detail and our presentation of a realistic sound stage between the speakers. We actually suggest auditioning every loudspeaker model in the MB Quart home audio line-up. After just one listening session of any MB Quart loudspeaker, the conclusion will be obvious. Somewhere in your home, you will be enjoying and feeling the music with MB Quart.

MBQUART
German Engineering

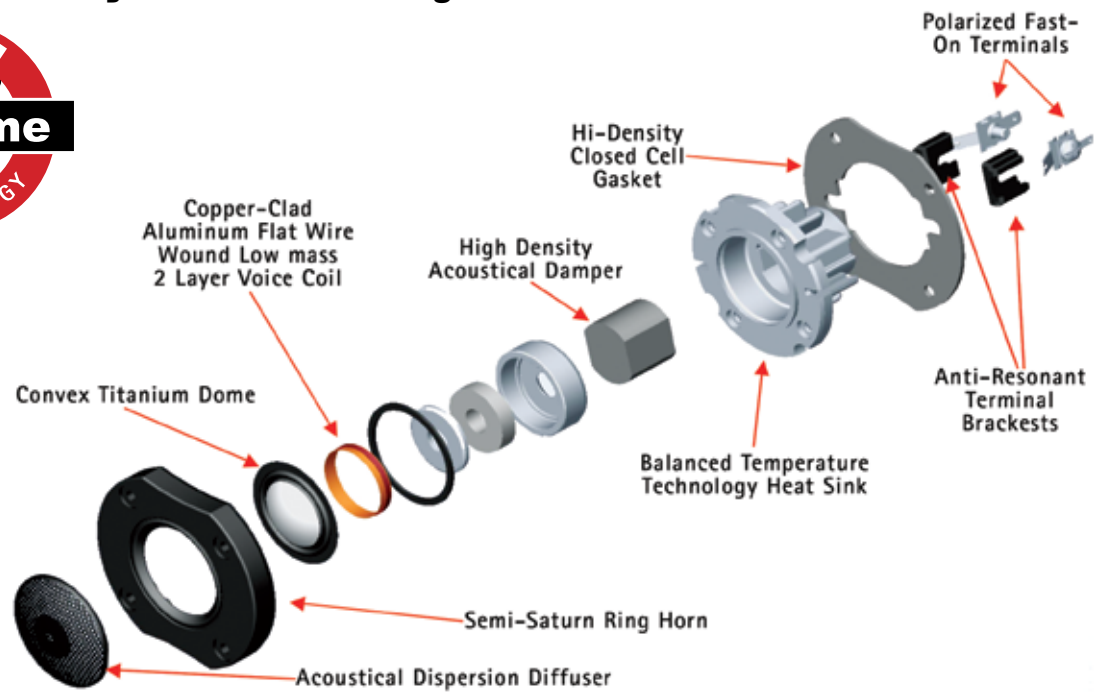

High-End personified

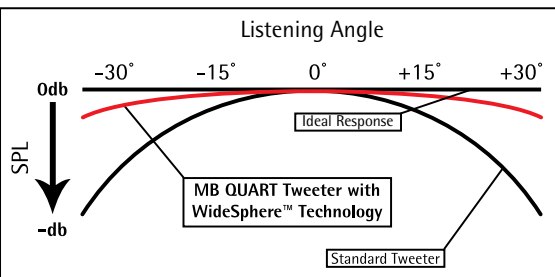

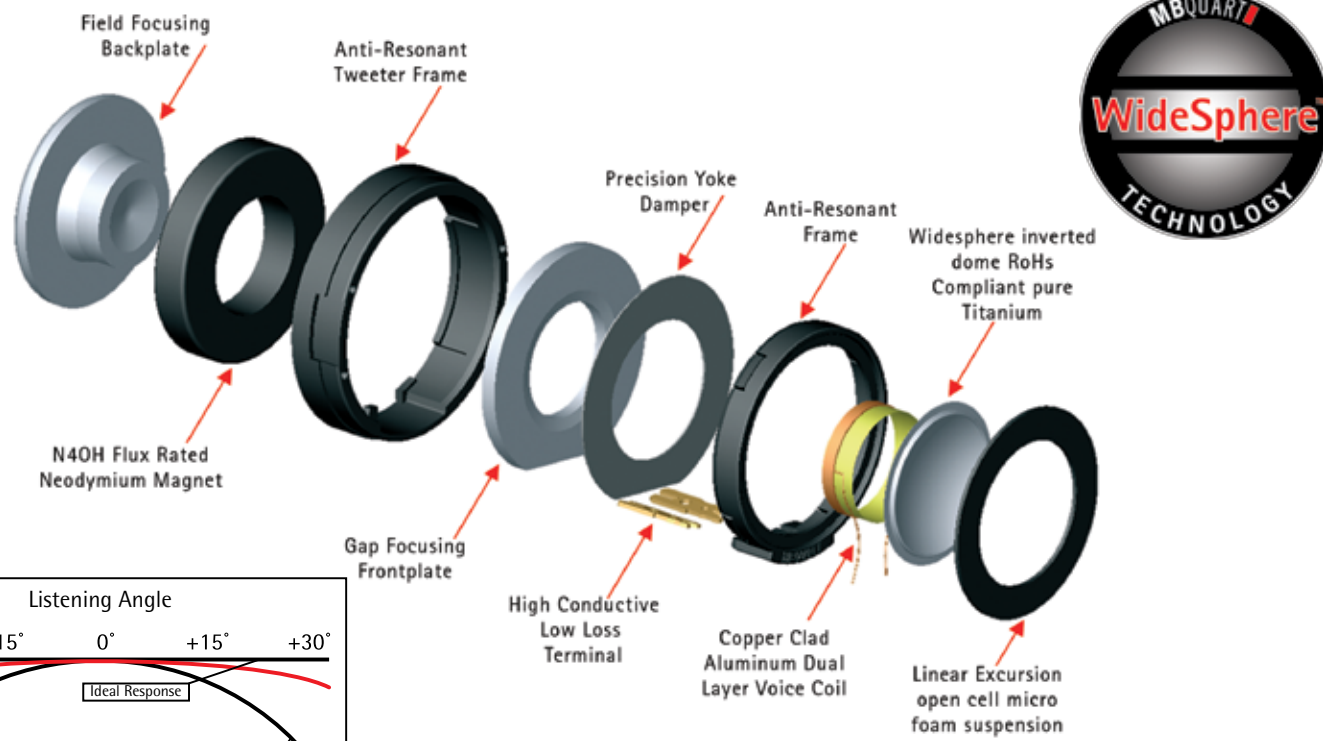

High End Personified

MB Quart utilizes the finest components and latest technology to develop outstanding loudspeakers. Our expertise in internal cabinet design coupled with drivers which painstakingly reproduce the music as it was recorded provide the listener with life like accuracy and precision. Tonal balance is acquired through timbre matched speakers for true theater sound. All can be complemented with our outstanding subwoofers and rear surround speaker designs.

Revolutionary Tweeter Designs

Ti-Dome
 MB Quart utilizes its exclusive "Ti-Dome" titanium dome tweeter in the Alexa and Heidelberg series. MB Quart established this tweeter over the last ten years as the ultimate "hand crafted" dome configuration.

Our Newest Innovation - WideSphere™

The heart of the WideSphere™ system is the new and unique tweeter QTF 40, used in the Milan and Veneto series, with its inverted titanium dome and high performance neodymium ring magnet. An extraordinarily wide radiation angle, an extremely low resonance frequency and tremendous power handling combined with outstanding linearity are the result of intensive research, computer simulations and decade-long experience with ultra light titanium as source material for tweeter domes. The use of new materials coupled with exhaustive engineering and tuning time leads to a specially defined connection of cap and surround calculated to the closest tolerances and a result far ahead of our competition. The spaciousness, precision and power handling all contribute to the new tweeter's superb tonal balance in both on-axis and off-axis installations. Simply put, this is the most versatile high performance tweeter ever built.

Handcrafted Audiophile Elegance

A L E X X A

Alexa 2008

The premium-grade Alexa Series loudspeakers are the cornerstone of MB Quart's loudspeaker line-up. All Alexa Series loudspeakers feature MB Quart's exclusive "Ti Dome" titanium dome tweeters. MB Quart established this tweeter over the last ten years as the ultimate dome configuration. Leading the line-up are floor standing Alexa speakers featuring D' Appolito type driver configurations, all are offered in a three different cabinet finishes; Cherry, Piano Black, and Piano-White finishes.

The Alexa is available in a floor standing, center and bookshelf design.

Alexa Subwoofers

The SW-12, a BASH™ powered subwoofer incorporates a 12-inch woofer and generates 300-Wrms power and 650 watts of dynamic power, the SW-10, also BASH powered, employs a 10-inch driver and delivers 250-Wrms power and 600 watts of dynamic power. Alexa SW subwoofers have acoustical suspension type MDF enclosures with a precise acoustical alignment that offers accurate bass response with very low distortion. Isolation feet secure the down-firing subwoofer system at an optimum height, ensuring consistent performance regardless of floor-covering type.

TELEVISION MIRRORS

A television with a disappearing act?

A TV Mirror is a mirror with an LCD TV conveniently built into it. What appears to be a finely crafted, distortion free mirror becomes your window to entertainment & morning news broadcasts. The MB Quart TV Mirror, crafted in the "German Engineering" style, can be easily accommodated for even the most challenging installations. The ease of installation makes the TV Mirror ideal for hotel rooms, bars, restaurants, bathrooms, living rooms, lobbies, salons, spas and even elevators.

Revolutionary Technology

MB Quart TV Mirrors exhibit true "plug and play" technology, and are ready for use on the day of purchase. All of our products come guaranteed with a one year warranty, backed by MB Quart's international accreditation. Featuring breakthrough mirror technology, our premier one-way glass and high-index mirror provide a natural reflection of color, matching a traditional mirror's reflection capabilities. As the brightest mirror/television combination on the market today, MB Quart's TV Mirror offers the clearest and most vivid color with glass technology that permits increased light transmission from the LCD HD television through the mirror; the perfect platform for viewing high-resolution programming.

Advantages of the 1-inch LCD HDTV

MB Quart Entertainment has revolutionized the industry with its introduction of the 1-inch LCD television, making the TV Mirror truly a "plug and play" unit. We have learned, with our experience with consumers, that the most cost-effective installation of a TV mirror product is a surface mount installation.

Surface Mount vs Recessed Mount

Past TV Mirror products used a standard LCD television, produced by leading television manufacturers, resulting in units with an overall depth of 4 to 5 inches. When installed, these units gave off a medicine cabinet appearance, leaving your guest no mystery as to where the television was located. When using a standard television in a TV Mirror unit, a recessed mount has been the most popular installation. Using the 1 inch television, you need only to remove the 3/4 inch dry wall, mount the bracket and plug in your TV Mirror product.

Custom and Integration Capabilities

MB Quart Entertainment's TV Mirrors are available in all standard mirror sizes and are able to be cut to any specific design requirement. Your designers will be able to find the perfect fit with our LCD screens ranging in size from 7 to 65 inches. You design the space and we will incorporate the most discreet television application that is possible.

The TV Mirror can be fully integrated with cable, DVD players, gaming systems, external sound systems and AV players. The TV Mirror comes with all of the standard A/V inputs and outputs you will find on any high-end LCD television, enabling use with a variety of external systems. Our TV Mirror also comes equipped with high-quality internal MB Quart speakers; external sound is optional and easily adaptable.

Alexxa In-Wall and In-Ceiling

Among the MB Quart Alexxa Series loudspeaker products offered are top-line premium performance In-Wall and In-Ceiling speaker systems. Alexxa Series In-Wall and In-Ceiling speakers incorporate the legendary MB Quart titanium dome tweeter technology in an aiming assembly. Both feature sealed hi-density metal back-box enclosures. The 5-1/4" thru the 8-inch Alexxa in-ceiling speakers feature 30-degree angled baffles and dual controls for boundary compensation behind the grilles. Special problem solving 2" and 3-inch Point Source in-ceiling speakers round-out the MB Quart Alexxa Series in-ceiling speaker line-up.

The Alexxa In-Wall features a D'Appolito speaker design for perfect dispersion effects. The design utilizes pearl-white poly drivers behind the paint-able grille / frame assemblies. Available in in-wall dual 5-1/4", dual 6-1/2" and dual 8-inch designs, the new in-wall speakers also feature dual boundary compensation controls behind the grilles.

A Complete 5.1 Solution

H E I D E L B E R G

Heidelberg 2008

Want to start out with MB Quart for your first system. Get hooked on the Titanium tweeter sound with our new Heidelberg series. This complete 5.1 system provides great sound at a great price.

Featuring a powered 10" subwoofer for outstanding bass, the floor standing offers a side firing 8" woofer and our signature D'Appolito configured 20mm Titanium tweeter and two 4" midrange drivers. Complementing the system is the rear surround and, for dialogues, a micro-center channel speaker.

Solution Driven Design ZURICH

Zurich In-Wall and In-Ceiling Loudspeakers

MB Quart Zurich Series products are top-performing yet value driven two-way in-wall and in-ceiling speaker systems featuring paint-able grille and frame assemblies and unique removable back, depth-reducing enclosures. The new Zurich Series swivel mounted tweeters offer upgrade sound-quality, high-efficiency, ultimate installation flexibility and considerable value. Custom installers have the unique problem solving flexibility of being able to actually reduce the Zurich Series in-wall and in-ceiling speakers mounting depths whenever obstructions are discovered during installation.
